Abstract

Chloroindolephemylethylamide analoga, including S-chloro-IH-indole-2-carboxylic acid [(18)-((R)hydroxydimethylcarbamoylmethyl)-2-phemylethyllamide, etc., and their prodrugs are claimed as glycogen
phosphorylase inhibitors for treatment of diabetic cardiomyopathy. The title compds, can also combine with
insulin, insulin analoga (biguanides), a2-antagonists, imidazolines, glitazone derivs, PPARy agonists, fatty acid
oxidin. inhibitors, a-glucosidase inhibitors, B-agonists, phosphodiesterase inhibitors, byordipdemics, antiobesity
agents, vanadium salts, glucagon antagonists, somatostatin analoga, aldose reductase inhibitors, sporbitol
dehydrogenase inhibitors, glucocorticoid receptor antagonists, and/or thyroid hormone analoga for treatment of
diabetes, cardiovascular diseases, heart ischemia, congestive heart failure, hypertension, diabetic angiopathy,
myocardial infarction, etc.
